Product Specifications

Intended Use	3 Dot rapid test device for detection of antibodies against HIV -1 including subtype C and HIV -2 in human serum and plasma	
Principle	Indirect Immunoassay	
Technique	Flow Through	
Detection	Antibodies to HIV -1 and HIV -2	
Capture	HIV 1 Region - Recombinant and Synthetic peptides of highly immunodominant region of gp 41 and gp 120	
	HIV 2 Region - Recombinant and Synthetic peptides of highly immunodominant region of gp 36	
Conjugate	Protein A gold Conjugate specific for Fc portion	
Type of Specimen required	Serum or Plasma	
Specimen Volume	50 ml (1 Drop)	
Result interpretation time	3 minutes	
Diagnostic Sensitivity	100%	
Diagnostic Specificity	> 99.5%	
Evaluations	National Institute of Biologicals; National AIDS Research Institute
